

21-hole system

Advantages of the 4CR 21-hole system:

The 4CR back up pad is the result of many years of experience in the flexible abrasive sector applied to bodywork, production and car repair, nautical, aeronautic and timber trades.

Our 21-hole back up pad gives excellent suction, the air flows directly from the surface to the middle for an even vacuum and extends the usage of the sandpaper. The 21-holes allow for more even flow across the whole of the disc surface.

This pioneering technology prevents bottleneck in the flow of dust during aspiration by channelling it directly through the "chamber". The system means that the speed and volume of the air being vacuumed in can be increased, with the consequent following advantages:

- continual cooling of the surface being sanded and of the abrasives itself, thus prolonging its life by 30% according to laboratory tests.
- improved removal of dust from the work surface and the air, thus improving the health of the operator and the quality of the work.

What is a Back up Pad?

It's a support for the abrasives which are mounted onto the pneumatic or electric sanding machine and is generally composed of a part in plastic, a part in rubber and a specially designed surface for the attachment of the abrasive disc using a self-stick or Velcro® system.

Recommended products:

3350 4CR Sanding Discs, Velcro, 150 mm, 21-hole

High-performance film sanding discs. This material is totally flat and non porous (contrary to standard paper backings which are, for their nature, porous) and this enables a smooth resin surface and as a consequence a constant grit highness level. The film backing provides a 100% flat and smooth base both for resins and grits, having as a final result a very flat grit level performing very well in sanding and refinishing. The abrasive performance is more precise and accurate. Available from grit P80 to P2000.

3800 4CR Air Sanding Machine

- 2,5 mm (6.3800.0025) or 5 mm (6.3800.0005) orbit
- Low noise levels
- Speed control knob
- Low vibration
- Multifunction exhaust

3805 4CR Back up Pad 21-hole

- Extra hard (blue) for rough grinding with hard grain (6.3805.2102)
- Medium hard (black) for sanding with medium grain (6.3805.7921)
- Soft (white) for sanding with fine grain (6.3805.2101)

3820 4CR Interface Pad 21-hole

Placed between back up pad and abrasive disc to create very soft sanding surfaces.
